SLEEK. MODERN. INNOVATIVE. EXPERIENCE BULBLESS LIGHTING TECHNOLOGY.
Introducing STELLAR, from the DIAPHANOUS™ collection

LOOM's bulb-less luminaire technology replaces the outmoded and inefficient light bulb-and-shade design of traditional lighting. We combine superior technology and high-design together in a decorative product with performance. LOOM uses an innovative component called a light-guide that directly emits light, replacing the inefficient diffuser of conventional light fixtures that is required to conceal intense light sources. No bulbs required!

Stellar lights up like the stars in the night sky: featuring a transparent light-guide, Stellar has hemispherical light extractors that glow like stars, seemingly suspended in the sky above you, designed to look like the star-map of the northern hemisphere. Stellar combines energy efficiency with superior lighting quality.
